SaarthiCare:

Problem statement 1:
Remote Elderly Healthcare & Family Care Coordination

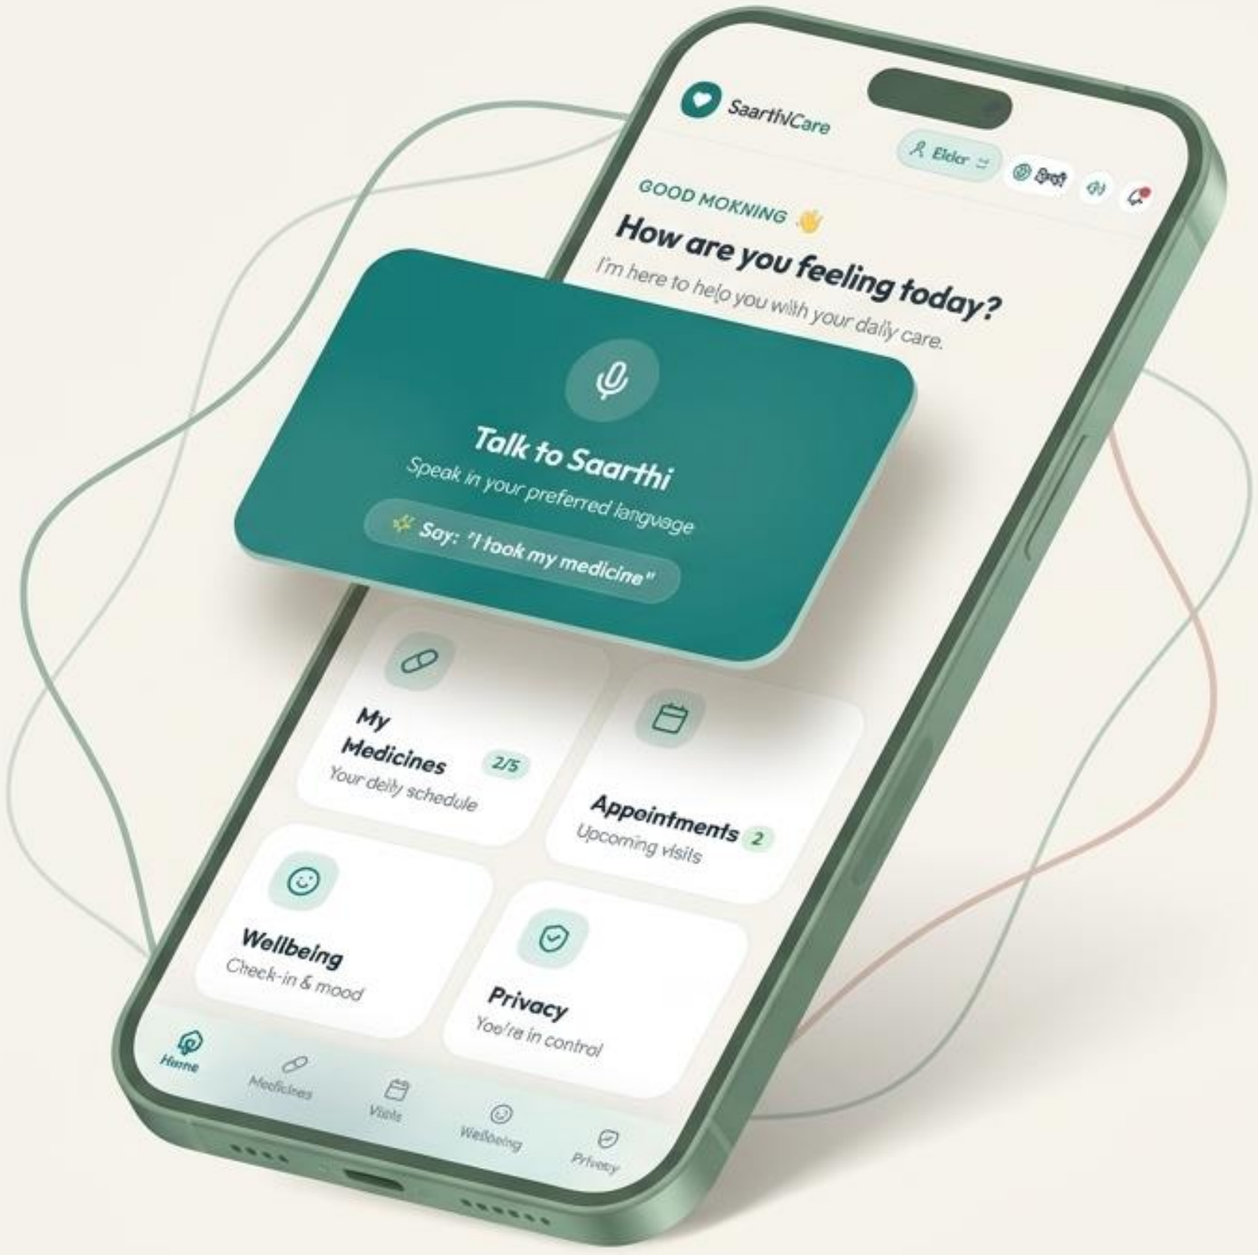

Application ID: 6ac27aecf7b3525536ad40dd

Team: Aryan Gupta and Awanish Kumar Jaisaval

SaarthiCare: Empowering Independence. Reassuring Families.

An AI-powered voice ecosystem built for elder dignity and family peace of mind.

The modern eldercare dilemma forces a painful compromise.

The Independence Trap

- Isolation
- High friction with complex apps
- Forgotten medications

The Helicopter Caregiver

- Constant anxiety
- Intrusive check-in calls
- Lack of real-time health data

Families are forced to choose between hovering over their parents or worrying in silence.

Meet Baba Ji and his son Amit.

Baba Ji (Omprakash Sharma)
Age: 72 • Lives Alone in Ludhiana

Wants to age in place, maintain his daily routine, and avoid feeling like a burden.

Amit Sharma
Son • Primary Contact

Works full-time in another city. Needs to know his father is safe without calling him three times a day.

An integrated ecosystem bridging the generational tech divide.

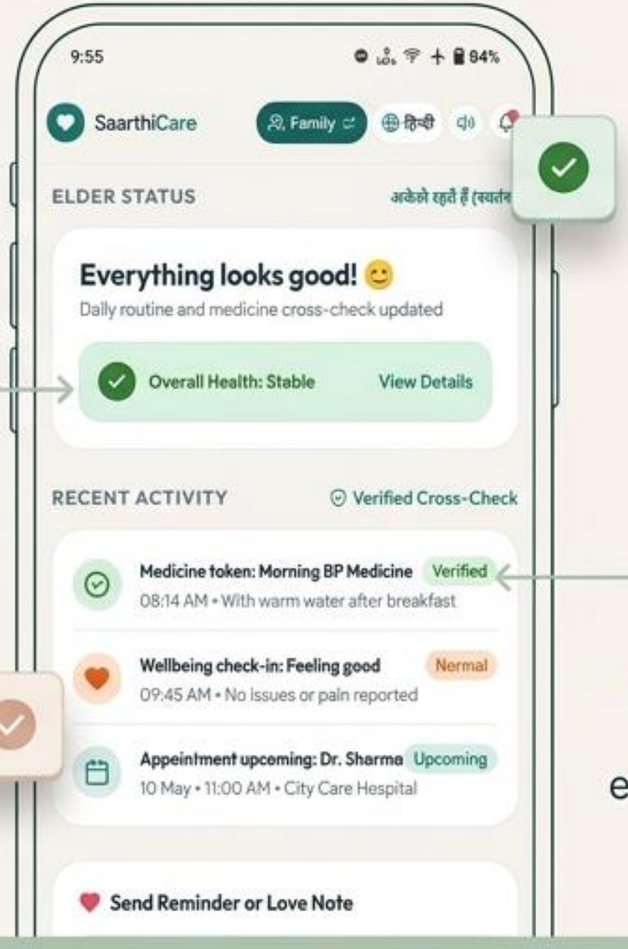

The Elder Experience: Zero-Friction Input

Massive target zones

Voice-centric design

The Family Experience: Rich Data Dashboard

Verified health trends

Caregiver data environment

Signal Over Noise: Intelligent Alert Triage

Level 1 (Red - Urgent):

EMERGENCY: Voice SOS Triggered
URGENT

Voice SOS emergency signal sent to Amit & Dr. Sharma

Action: Immediate push notification to all contacts.

Level 2 (Yellow - Attention Needed):

Attention Needed
Today · 09:30 AM

Repeated fatigue reported (3 days)

Action: Flags a trend that requires a check-in conversation.

Level 3 (Orange/Green - Routine):

Wellbeing Update
Just now

Baba Ji feeling Tired · Concern: Sleep

Action: Logs silently in the feed for passive reassurance without buzzing the family's phones.

8:00 AM: Voice AI eliminates the mobile learning curve.

Baba Ji doesn’t need to navigate menus or tap tiny checkboxes. He simply taps one button and speaks naturally in Hindi, Punjabi, or English.

Step 1

Tap & Speak

Step 2

Natural Language Input

Step 3

Multi-turn AI Response

The Architecture of Reassurance: Action to Insight.

1

Action: Natural Language Input

Natural Language Input

Baba Ji says he drank water or took medicine.

2

Processing: Intent Extraction

AI parses the phrase, identifies the exact medication/action, and updates the database.

3

System Log: Action Verified

Medicine Taken via Voice

Baba Ji confirmed: सुबह की बीपी की दवा (Telmisartan 40mg) at 09:40 PM

4

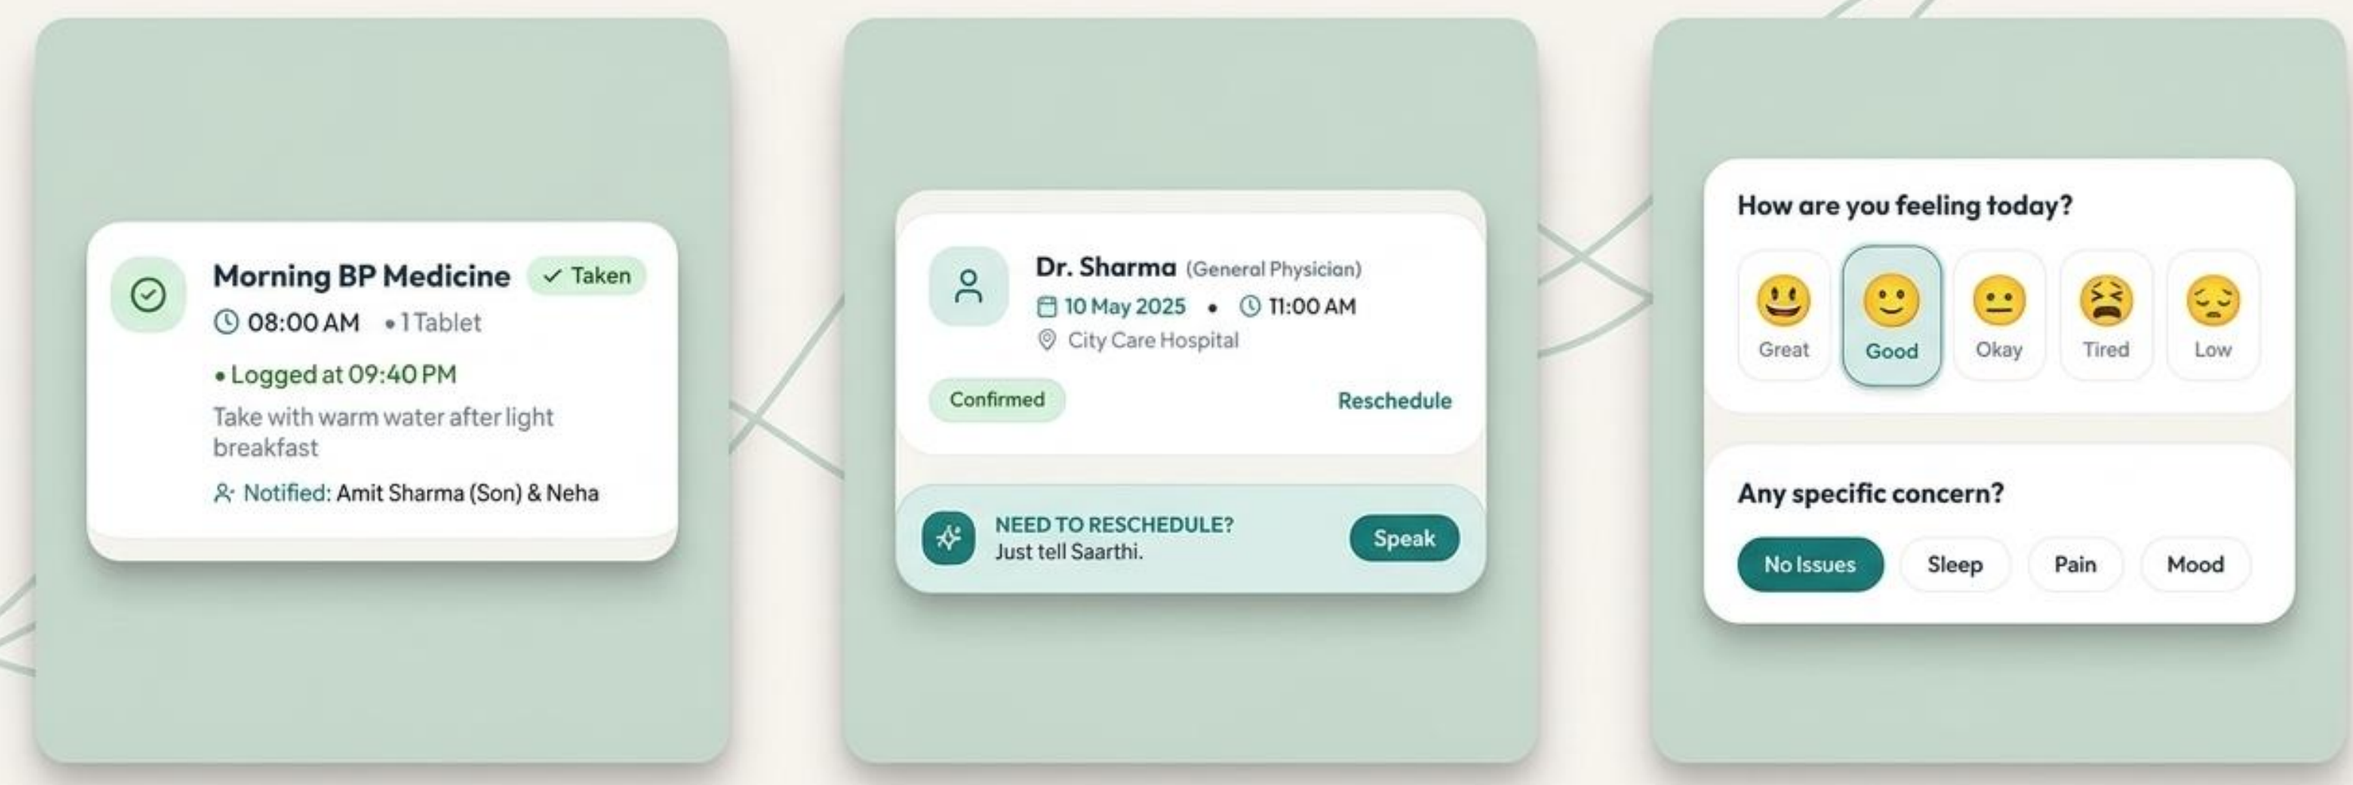

Routing: Family Notification

The system checks permissions and silently updates the primary contacts (Amit and Neha).

9:45 AM: Managing the complex reality of daily wellbeing.

Beyond medication, SaarthiCare tracks emotional health, physical pain, and medical appointments through an empathetic interface.

1:00 PM: Real-time family reassurance without the intrusion.

Amit checks his phone between meetings. Instead of calling and waking his father from a nap, he gets an instant, verified update.

Everything looks good! 😊

Overall Health: Stable

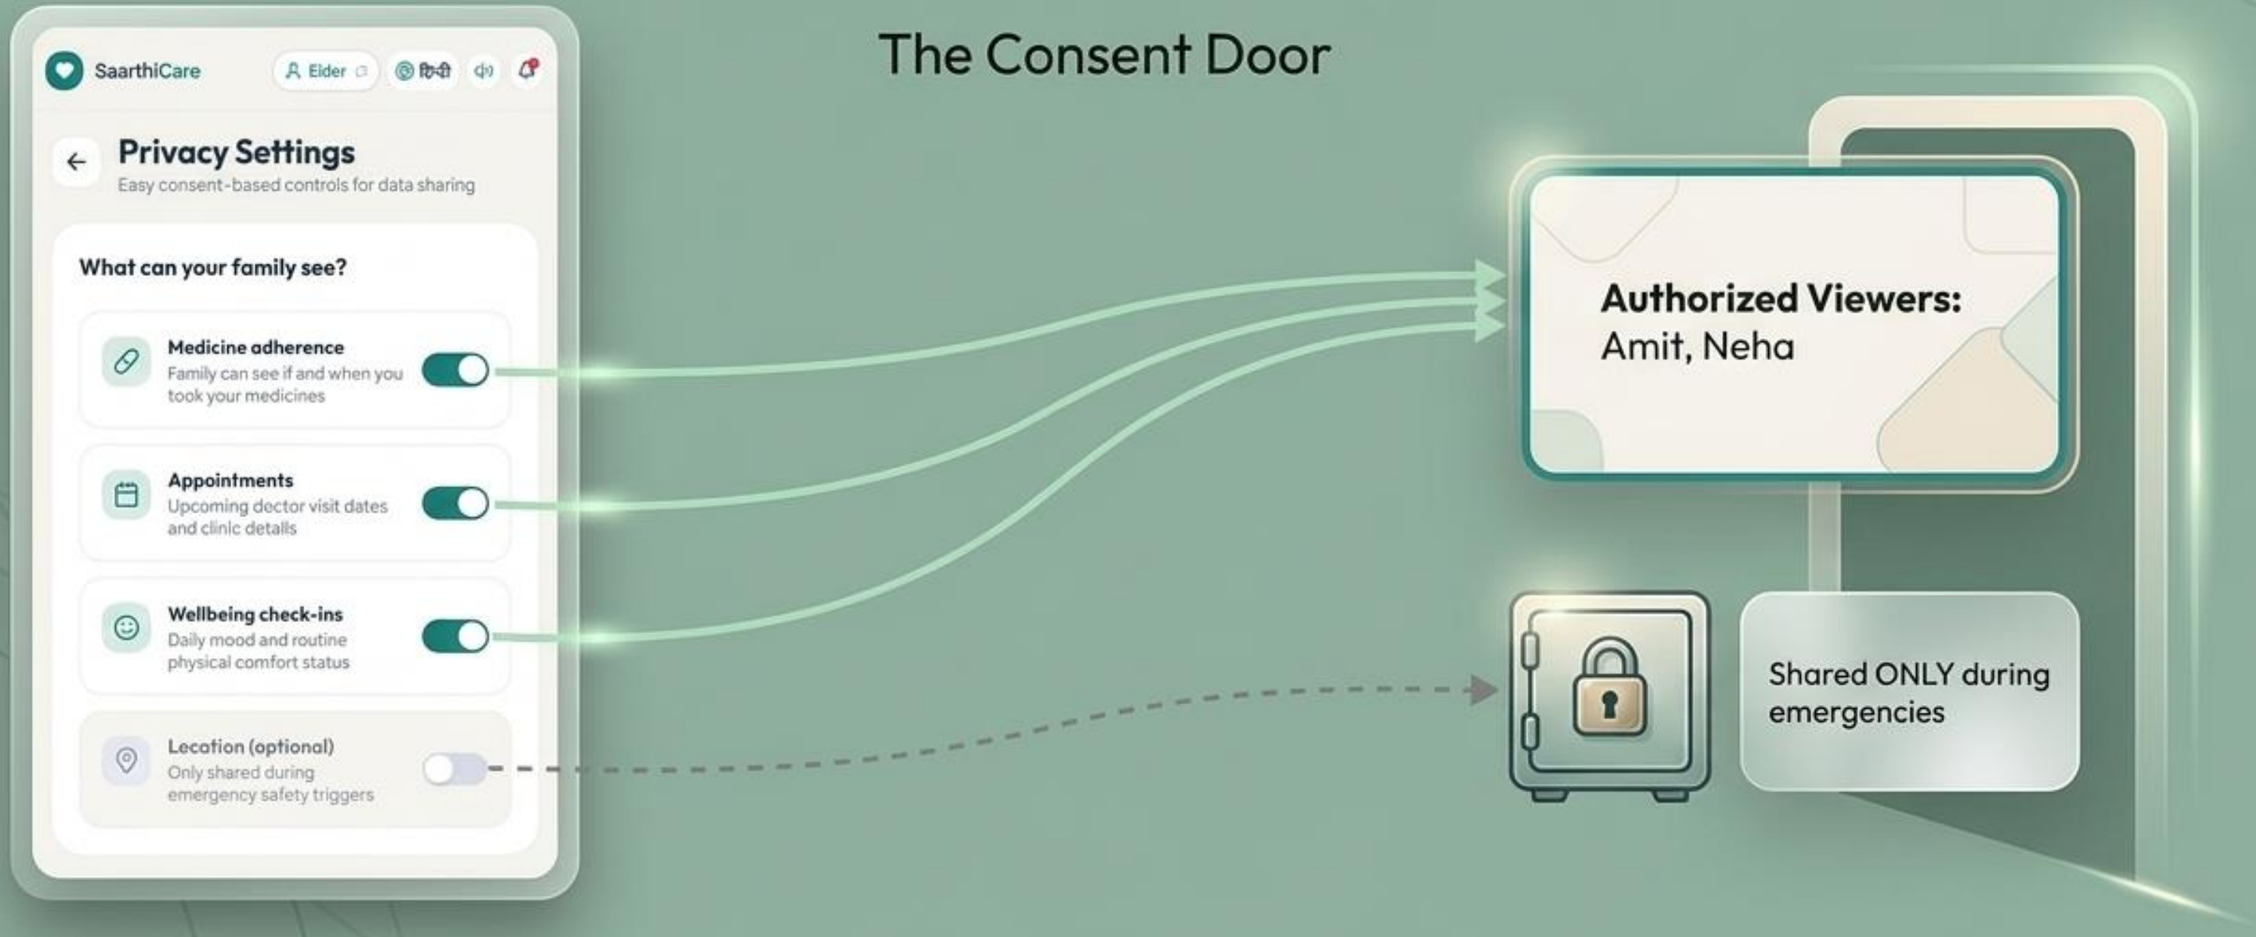

Send Reminder or Love Note

Tap to send your pre-written:

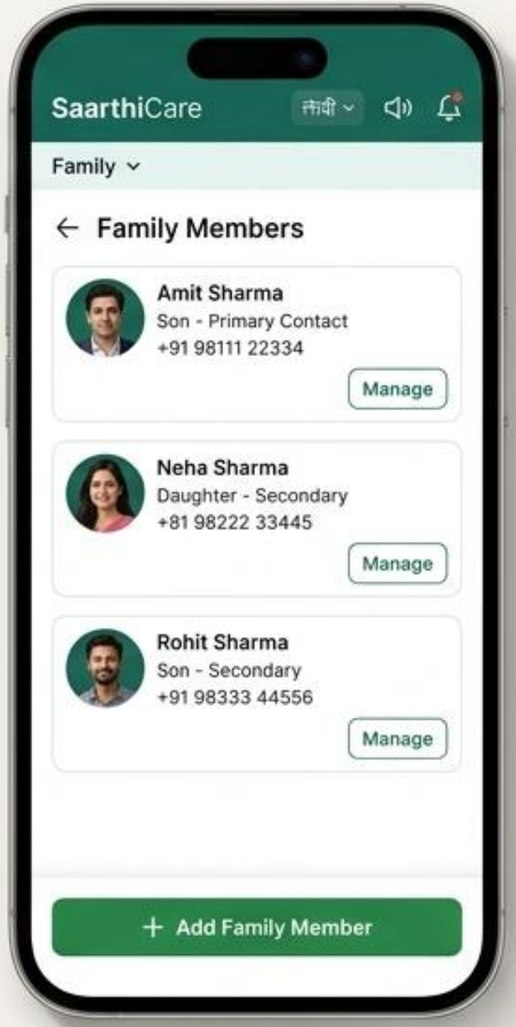

🥛 Keep drinking warm water!

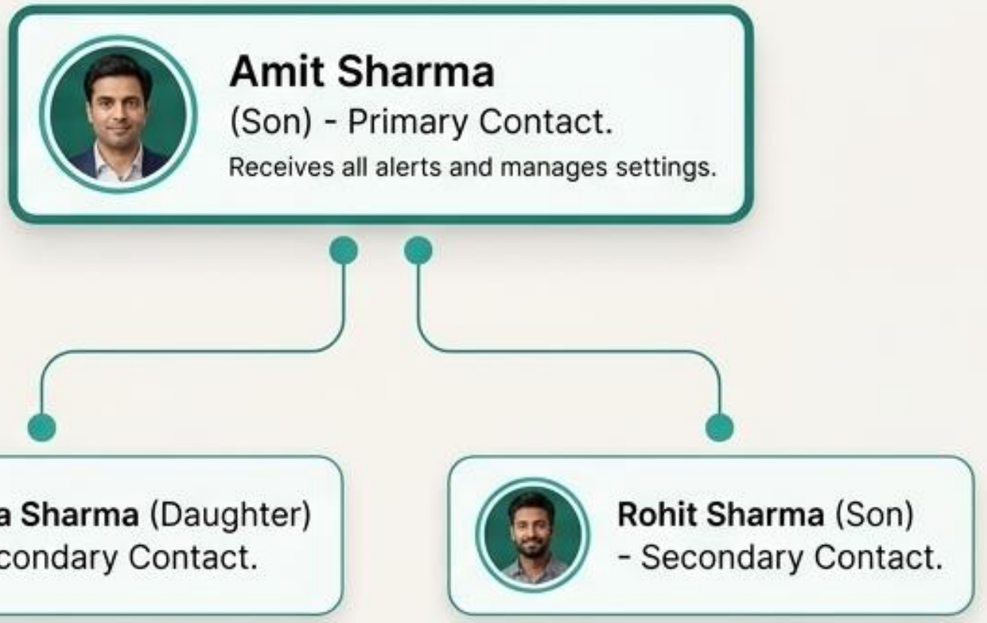

3:00 PM: Dignity First. Elders control their digital footprint.

Unlike surveillance-heavy eldercare apps, SaarthiCare operates on strict, elder-managed consent. Baba Ji decides who sees what.

Distributing the Cognitive Load of Caregiving

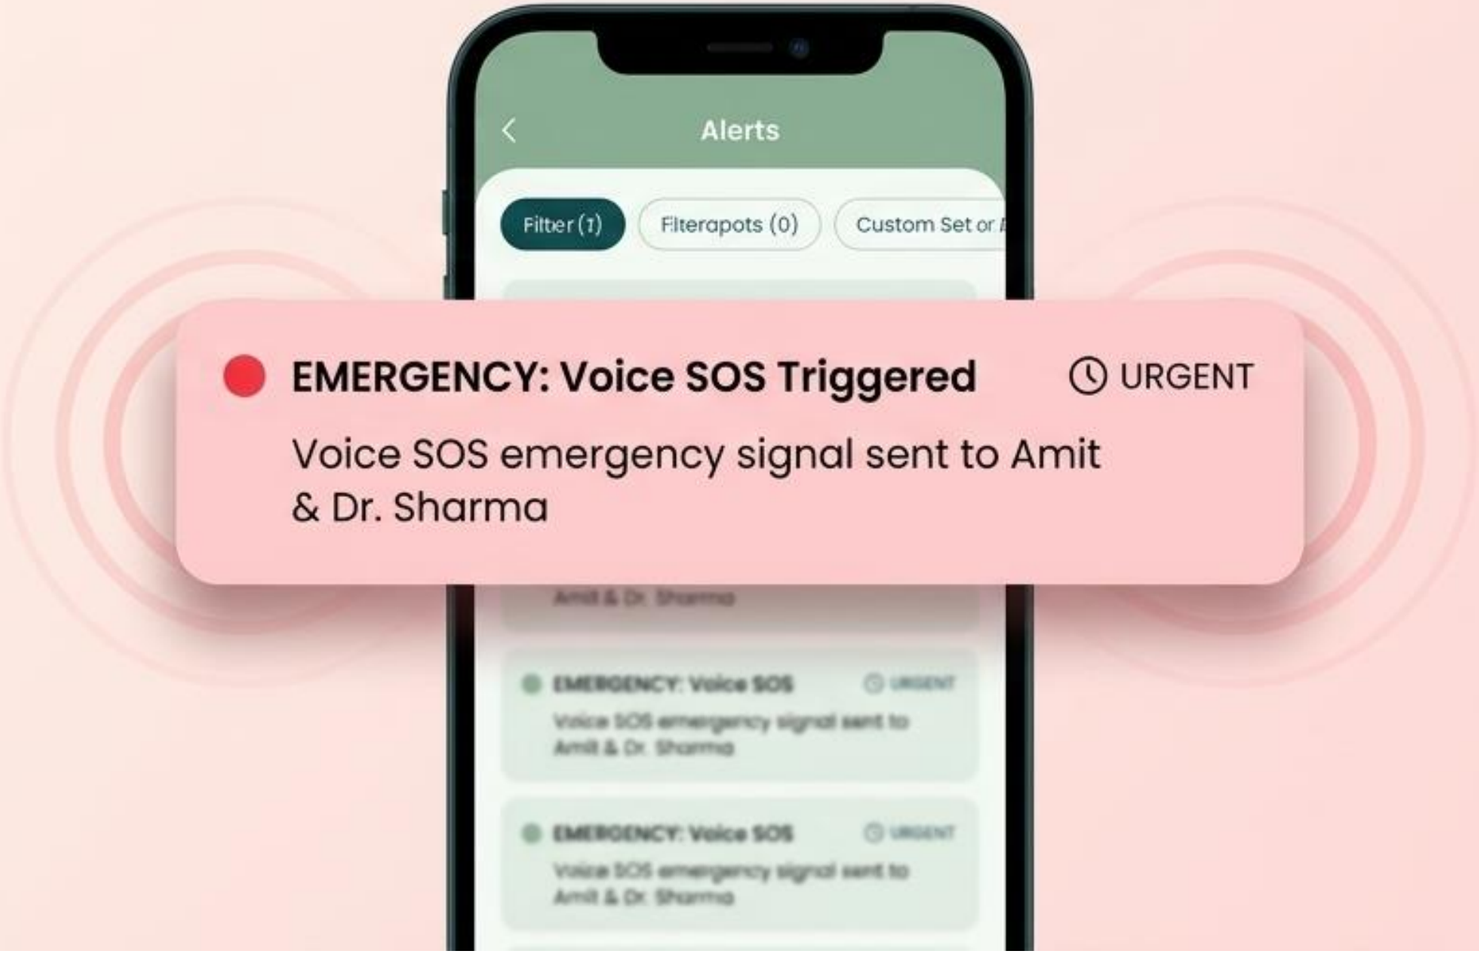

Key Insight: By assigning Primary and Secondary roles, SarthiCare prevents 'bystander effect' in caregiving (assuming someone else checked in) while preventing redundant, annoying phone calls to the elder.

8:00 PM: Smart interventions when seconds matter.

If Baba Ji misses a critical dose, or triggers a voice SOS, the system breaks the passive dashboard model and pushes urgent alerts directly to the family.

The Eldercare Paradigm Shift.

	Traditional Apps	SaarthiCare
Interface	Touch-heavy, complex menus	**Voice-first, Natural Language**
Learning Curve	Requires training, high abandonment.	**Zero curve, instant adoption**
Architecture	Passive tracking / Surveillance.	**Active consent-based logging**
Family Connection	Dry clinical data	**Contextual updates + Love Notes**
